Chapter 6 - AI & Managing Time & Tasks (1)

Chapter 7: AI and Academic Creativity

<https://zair-bouzidi.github.io/zair-site/>

Dr Zair BOUZIDI

zair.bouzidi@univ-bejaia.dz

Academic year: 2025 - 2026

Introduction

 **AI plays** a significant role in **improving personal and professional organization.**

Thanks to **intelligent tools**, it's possible to

- **automate** planning,
- **optimize** time management, and
- **simplify** the organization of **daily tasks.**

Introduction (2)

AI systems:

- analyze **work habits**,
- prioritize **activities**, and
- offer **tailored suggestions** to:
 - + increase **productivity** and
 - + reduce the **cognitive load** associated with task management.

Summary

Chapter 4: AI for Time and Task Management

1. Personal Organization with AI

1.1 Intelligent Activity Planning

1.2 Note and Project Organization

1.3 Decision Support

2. Automatic To-Do List Generation

Automatic to-do list generation with AI

Personal Organization with AI

AI is gradually transforming personal **organization methods** by offering **tools** that can assist **users** in:

- managing their **time**,
- planning their **activities**, and
- optimizing their **productivity**.

Unlike traditional time management tools, **AI**-powered **systems** can:

- analyze **work habits**,
- anticipate **needs**, and
- automatically suggest **tailored solutions**.

The **main objective** of these **tools** is to:

- reduce the **cognitive load** associated with **organizing daily tasks** and
- help users focus on high-value **activities**.

Smart Activity Planning

Modern time management tools use **AI algorithms** to:

- analyze user behavior and
- offer optimized activity planning.

For example, a smart calendar can:

- automatically suggest the best times to complete certain tasks,
- detect scheduling conflicts,
- send smart reminders,
- adapt schedules based on priorities.

Smart Activity Planning

A widely used example is **Google Calendar**, which allows users to:

- organize events.
- schedule meetings, and
- receive automatic notifications

to ensure they don't forget important activities.

1. Google Calendar

Google Calendar is a free time management app created by Google.
It lets you:

- organize your **schedule**,
- plan **meetings**, and
- **receive automatic reminders.** 

1. Google Calendar

1. Main Features

Event Scheduling: Add classes, meetings, or appointments.

Automatic Reminders: Notifications before an event (minutes, hours, or days).

Synchronisation: Works on computers, Android phones, and iPhones.

Multiple Calendars: Work, personal, projects, etc.

Calendar Sharing: Useful for teams, students, or projects.

Gmail Integration: Reservations or tickets received by email can appear automatically.

1. Google Calendar

2. Example of Use (for personal organization)

With AI and automation, you can:

- create a revision schedule for students
- generate a daily to-do list
- organize a research or teaching schedule

Example:

- 9:00 AM – Reading scientific articles
- 11:00 AM – Writing an article
- 2:00 PM – Class/Meeting
- 4:00 PM – Data analysis

1. Google Calendar

3. How to use Google Calendar

Go to: <https://calendar.google.com>

Sign in with a Google account.

Click **Create** (+).

Add:

- **Event title**
- **Date and time**
- **Reminder (notification).**

1. Google Calendar

4. Using with AI

You can combine **Google Calendar** + AI to:

- automatically generate a schedule
- analyze your work time
- suggest the best available time slots.

Example tools:

- **Notion AI**
- **Motion**
- **Reclaim.ai**

✓ **Main advantage:** improved **time management** & **reduced stress**.

Organizing Notes and Projects

Modern productivity platforms also allow you to structure: - information,
using intelligent assistants. - notes, and
- projects

A **popular example** is **Notion AI**, which combines:
- note management,
- databases, and
- artificial intelligence.

This type of tool allows you to:

- automatically generate to-do lists,
- organize projects into steps,
- summarize documents,
- transform ideas into structured outlines.

For example, a teacher might ask:

"Generate a lesson plan for an Introduction to Artificial Intelligence module."

The tool can then suggest a **structure including**:
- the **main chapters**,
- **learning activities**, and
- **exercises**.

2. Notion AI

Notion AI is an **AI** feature integrated into the **Notion** productivity tool. It acts as an intelligent assistant that helps you write, organize, analyze, and automate work directly within your workspace.

◆ What is Notion AI for?

Notion AI allows you to **automatically** perform several **tasks** in your **notes** and **projects**:

- Write **content**: articles, reports, emails, lecture notes.
- Edit and improve **text**: grammar, style, summary.
- Analyze data in Notion databases.
- Translate text into different languages.
- Summarize documents or meetings.
- Search for information in your workspace and in connected applications like Google Drive or Slack.

◆ Use Cases

1. For Students

- Generate an automatic revision plan
- Summarize a long lecture into key points
- Transform notes into revision cards

2. For Researchers/Teachers

Write a draft of a scientific article
Summarize several scientific articles
Organize a research schedule

3. For Task Management

Automatically create a to-do list
Plan a project
Generate meeting notes

◆ Simple Example

You can type in **Notion AI**:

Summarize this scientific article in 5 points.

or

Create a 7-day revision schedule using artificial intelligence.

The **AI** immediately generates the answer on the page.

◆ Advantages

- ✓ Time saving
- ✓ Smart note organization
- ✓ Work automation
- ✓ Everything is done in the same tool without switching applications.

Helpful tip: Many **researchers** use **Notion AI** to:

- manage their scientific articles,
- organize their research projects,
- and create bibliographic databases.

Notion: How does it work?

Notion is an all-in-one platform that allows you to take notes, manage tasks, organize projects, and create databases in a single workspace.

It is used by students, researchers, businesses, and teams to organize information.

1. Basic principle: Pages

In **Notion**, everything is organized into pages.

A **page** can contain:

- text
- images
- tables
- to-do lists
- databases
- files

Example:

Main page

- Research project
- Lecture notes
- To-do list

Each page can contain other pages, creating an organized structure.

2. Blocks

Notion works with a system called **blocks**.

Each element is a **block**:

- paragraph
- title
- image
- table
- list

For example:

- Text block
- Title block
- Checklist block
- Table block

This allows you to easily move and organize content.

3. Databases

A very powerful feature of Notion is its database.
It can be displayed in different formats:

- Table
- Calendar
- Kanban
- List
- gallery

Example for a research project:

Article	Status	Date
Paper 1	To Read	March 12, 2026
Paper 2	Summary	March 15, 2027

4. Task Management

Notion can be used as a task manager:

- create a to-do list
- add deadlines
- track project progress.

5. Collaboration

Notion allows you to work as a team:

- share a page
- comment on a document
- edit a project collaboratively.

6. Notion with AI

With Notion AI, Notion can also:

- generate text
- summarize a document
- correct text
- translate content.

Example for a student or researcher

A Notion workspace can contain:

- Scientific articles
- Research notes
- Work schedule
- To-do list
- Project tracking

Everything is centralized in a single tool.

✓ Advantages:

- highly flexible organization
- easy collaboration
- project and note management
- AI integration.
