Chapter 6 - AI & Managing Time & Tasks (2)

Chapter 7: AI and Academic Creativity

<https://zair-bouzidi.github.io/zair-site/>

Dr Zair BOUZIDI

zair.bouzidi@univ-bejaia.dz

Academic year: 2025 - 2026

Introduction

AI plays a significant role in improving personal and professional organization.

Thanks to **intelligent tools**, it's possible to

- **automate planning,**
- **optimize time management, and**
- **simplify the organization of **daily tasks**.**

Introduction (2)

AI systems:

- analyze work habits,
- prioritize activities, and
- offer tailored suggestions to:
 - + increase productivity and
 - + reduce the cognitive load associated with task management.

Personal Organization with AI

AI is gradually transforming personal **organization methods** by offering **tools** that can assist **users** in:

- managing their **time**,
- planning their **activities**, and
- optimizing their **productivity**.

Unlike traditional time management tools, **AI**-powered **systems** can:

- analyze **work habits**,
- anticipate **needs**, and
- automatically suggest **tailored solutions**.

The **main objective** of these **tools** is to:

- reduce the **cognitive load** associated with **organizing daily tasks** and
- help users focus on high-value **activities**.

Smart Activity Planning

Modern time management tools use **AI algorithms** to:

- analyze user behavior and
- offer optimized activity planning.

For example, a smart calendar can:

- automatically suggest the best times to complete certain tasks,
- detect scheduling conflicts,
- send smart reminders,
- adapt schedules based on priorities.

Motion AI

<https://www.motion.ai/>

Motion is an **AI**-powered **time** and **task** management **tool**. It:

- acts as a smart personal **assistant**,
- automatically plans your **day**,
- organises your **projects**, and
- manages your **calendar**.

◆ What is Motion?

Motion is a **platform** that combines several **tools** into one:

- Calendar
- Task management
- Project management
- Automatic scheduling with AI

The application analyses your **tasks**, **priorities**, **deadlines**, and **availability**, then automatically creates an **optimized schedule** in your **calendar**.

Motion AI

<https://www.motion.ai/>

◆ Main features

1. Automatic scheduling

When you add a **task**, the AI:

- looks at your calendar
- analyzes your priorities and deadlines
- automatically places the **task** at the **best time**.

If an **appointment** changes, Motion automatically reorganizes your schedule.

2. Project Management

You can create:

- **projects**
- **tasks** with duration and priority
- **dependencies** between tasks

AI can even automatically generate project tasks from a simple description.

3. Smart Calendar

Motion can **connect** with:

- **Google Calendar**
- **Outlook**
- **Apple Calendar**

All your **meetings** and **tasks** **appear** in a **single smart calendar**.

4. Automatic Work Organization

Motion **helps** you:

- **avoid** scheduling° **conflicts**
- **prioritize** important **tasks**
- **track** **deadlines**

The goal is to **reduce** the time **spent** **organizing work** and **focus** on important **tasks**.

◆ Example of Use

A researcher or student might add:

- Read 3 scientific articles (2 hours)
- Write article introduction (3 hours)
- Analyze data (2 hours)

Motion will automatically **schedule** these tasks throughout the day based on meetings and availability.

Example of Motion Use

◆ Advantages

- ✓ Automatic task scheduling
- ✓ Calendar integration
- ✓ Project and meeting management
- ✓ Time-saving organization

◆ Limitation

No permanent free version (only a trial).

Quick Comparison

Tool	Main Function
Notion AI	Note writing and organization
Google Calendar	Traditional calendar management
Motion	Automatic task scheduling with AI

Reclaim.ai

Reclaim.ai is an intelligent scheduling tool powered by **AI** that automatically organises your time in a calendar.

It primarily works with **Google Calendar** and **Microsoft Outlook** to optimize your schedule.

Its goal is simple: to automate calendar management to improve productivity and work-life balance.

◆ How it works

Reclaim analyzes your **calendar** and **priorities**, then automatically schedules:

- tasks
- meetings
- habits or routines
- focus time
- breaks or travel

If your schedule changes, the AI automatically reorganizes your **planning to **preserve important** tasks.**

◆ Key features

1. Automatic task scheduling

You add a task with:

- duration
- priority
- deadline

The AI automatically places the task at the best time in your calendar.

2. Focus Time

Reclaim automatically protects uninterrupted work periods for important tasks.

3. Intelligent Meeting Management

- Finds the best time for all participants
- Avoids calendar conflicts
- Can automatically reschedule meetings if necessary.

4. Habit Management

You can create routines such as:

- Exercise
- Reading
- Research

AI automatically finds the best times each week.

◆ Example of Use

A researcher or student can add the following to Reclaim:

- Read 3 scientific articles (2 hours)
- Write an article (3 hours)
- Analyze data (2 hours)

AI will automatically schedule these tasks throughout the week based on your meetings and availability.

◆ Benefits

- ✓ Calendar Automation
- ✓ Reduced Organizational Stress
- ✓ Improved Productivity

✓ **Free version available.**

Some analyses show that users can reclaim several hours of focus per week thanks to smart scheduling.

1.3 Decision Support

Some **AI**-powered **tools** also help users prioritize their tasks based on several **criteria**:

- **task importance,**
- **urgency,**
- **available time,**
- **personal or professional goals.**

These systems can thus offer **recommendations** such as:

- "start with the most urgent tasks,"
- "postpone certain activities to a more appropriate time,"
- "group similar tasks to save time."

This approach **improves** productivity and prevents work overload.

Conclusion

AI-assisted **personal organization** is now an **essential tool** for improving **efficiency** in academic and professional **contexts**

By

- automating certain organizational tasks, and
- offering **intelligent recommendations**,

these technologies allow for better

- **time management**,
- **resource optimization**, and
- **increased individual performance**

Automatic To-Do List Generation with AI
is the use of
AI

1. What Is Automatic To-Do List Generation?

Automatic to-do list generation refers to AI tools that transform information (messages, schedules, projects, or documents) into actionable tasks.

For example, if you input:

“Prepare lecture slides, review two research papers, and send the exam announcement to students.”

An AI system can automatically produce:

- Prepare lecture slides
- Review research paper 1
- Review research paper 2
- Send exam announcement to students

It can also prioritize tasks and assign deadlines.

Automatic To-Do List

2. How AI Generates To-Do Lists

AI tools typically use **techniques** from **Natural Language Processing** and **Machine Learning** to analyze text and detect actions.

The process usually includes:

Input analysis : **AI** reads notes, emails, or text.

Task extraction : It identifies verbs and actions (e.g., write, send, prepare).

Task structuring: Tasks are converted into **checklist items**.

Prioritization : Tasks are ranked according to **deadlines** or **importance**.

Scheduling : Tasks can be inserted into a **calendar**.

3. Examples of AI Tools for To-Do List Generation

1. Notion AI

- Converts notes into tasks automatically
- Generates project checklists
- Organizes research or course preparation tasks

Example prompt:

“Create a to-do list for preparing next week’s AI lecture.”

AI output:

- Review lecture notes
- Update slides
- Prepare examples
- Upload materials to LMS

2. Todoist

- AI automatically suggests tasks
- Uses natural language input
- Adds deadlines automatically

Example:

“Submit conference paper tomorrow at 5 pm”

AI creates:

- Task: Submit conference paper
- Deadline: Tomorrow, 5 pm

3. Microsoft Copilot

- Extracts tasks from emails and documents
- Converts meeting notes into action items
- Generates task lists automatically

Example:

After a meeting summary, Copilot generates:

- Send project report
- Schedule next meeting
- Review dataset

4. Google Calendar with AI

- Suggests tasks based on events
- Automatically schedules work sessions

Creates reminders
